Investing in Our Streets: Road Improvements Planned Across Abbeville

Abbeville, LA — The City of Abbeville is continuing to move forward with a roadway improvement program funded through the City's Road Improvement Fund, including funding provided through the State of Louisiana Capital Outlay Program.

The Road Improvement Fund currently totals approximately \$3.1 million, with \$3 million appropriated by the State of Louisiana to support municipal roadway infrastructure improvements throughout the city.

Streets currently identified for improvements include Old Kaplan Highway, Wildcat Drive, Washington Street, and North Lyman Street, with additional streets to be announced as engineering and planning continue.

City engineers are currently working to determine the scope of work needed for each roadway, including base work, drainage improvements, and resurfacing. Once the engineering phase is completed, the projects will move forward through the public bid process, followed by construction.

Mayor Roslyn White said the roadway improvement program is an important step toward addressing infrastructure needs across the community.

"This investment represents meaningful progress in addressing infrastructure needs throughout our community. We are committed to improving the condition of our streets and making long-term improvements for our residents," Mayor White said.

The City of Abbeville will continue to provide updates as these projects move through the engineering, bidding, and construction phases.
